MODULO ARTIC HX 310

ASYMMETRIC

Double compartment flotation chamber with X3D system rotation system, in PA 420 PU COATED fabric with electronically controlled high frequency welding. Designed to follow the ergonomics of the body and optimize its position in the water. Thanks to its Particular Asymmetrical Design, It Encourages A High Rotation speed even when wearing particularly heavy clothing, for work or for example an Immersion Suit. Through the "fins" structure placed behind the neck, it provides excellent support and perfect stability to the user's head. The shape of the inflating chamber provides respiratory protection against wave motion and guarantees the best freeboard in the inflatable vests category.

ACTIVATION SYSTEMS:

- Automatic: upon falling into the water, the system automatically activates within 5 seconds of submersion, with the inflation of the floatation chamber. Automatic activation occurs thanks to the salt activator UML MK5, through the dissolution of a water-soluble tablet or with the Hammar MA1 hydrostatic activator due to the pressure generated from being immersed in the water by at least 10 cm.
- Manual: the system is operated through pulling the dedicated lever. The product comes with the UML MICROMANUAL activator booklet and is activated exclusively by hand.
- Oral: this type of inflation is achieved via the special mouth tube, with a non-return valve and protective cap. To inflate the chamber, simply blow into the tube.
