HR Water-Soluble Bobbin

Art. 25002

The **water-soluble bobbin** for the **Halkey Roberts V90000 mechanism** is a critical component for ensuring the automatic activation of the lifejacket. Designed to dissolve rapidly upon contact with water, it triggers the release of gas from the CO_2 cylinder, inflating the lifejacket in emergency situations. Essential for the periodic maintenance of the device, this bobbin ensures that the system is always ready for use, providing maximum safety in both recreational and professional marine environments.
