

EXCLUSIVE SAFETY TECHNOLOGIES

Safety at sea is our main priority. We manage all research, design and production processes with the utmost care so as to offer certified equipment for all nautical fields, with the highest production standards.

All research and development activities are certified by the Department of Applied Science and Technology of the Polytechnic University of Turin, in accordance with EU regulations.

THE PRODUCTION PROCESS AND TRACEABILITY

With the aim of making inflatable life jackets more reliable, in 1994 Veleria San Giorgio introduced the Unique Product Code system. As the only manufacturer in the world to employ this type of technology, VSG is now able to identify all materials and individual components utilised through distinct alphanumeric codes.

ISO 9001:2015

Production processes are controlled via software specially developed by VSG, covering 100% of production so each product can be traced back to its buyer with absolute precision. This drastically reduces manufacturing defects (less than 1/10000 of returns), guaranteeing each buyer a unique product in the truest sense of the word and – most importantly – the highest degree of safety when needed.

Thanks to their ergonomic features, our life jackets guarantee an optimal position in the water and great stability. In addition, the vests offer enough buoyancy to rotate and tilt an unconscious person, so as to always keep the airway out of the water.

SUB A 200

Individual safety device designed for the special corps of the Italian Navy per Article 04011, consisting of two inflatable chambers with independent manual activation.

Buoyancy system comprised of two independently-activated inflating chambers, each with a buoyancy of 100N and two 24-gram CO₂ canisters each. Total buoyancy 200N.

When properly worn and used in water, this item provides enough buoyancy to position and keep an adult wearer weighing over 40 kg when they are in difficulty, keeping the airway out of the water so as to increase the likelihood of rescue.

The life vest consists of three main parts: chamber, outer casing and waist belt.

The outer casing constitutes the main part of the vest. When ready to be worn and not yet activated, the wearer must place the vest behind their neck and in front of the chest. Activation of the chamber does not affect inflation. Collar pouch made of Polyester 600 material with double PU WR finish, black in colour and Velcro closure, allowing for automatic opening in case of activation

The waistband complements the casing by completing the outer appearance of the finished vest ready to be worn. The waistband, complete with adjustable buckle, facilitates adjustment of the vest around the waist. A quick-release buckle in high-strength acetal plastic is attached to the belt.

Closure and adjustment system: adjustable waistband with quick-release acetal buckle, back band support with fabric back support that ensures the correct positioning of the inflatable chambers once activated.

Fit: the device is worn like a waistcoat, with the adjustment buckle positioned in the centre of the chest. Big ergonomics in a small package.

Short length and easy-to-wear vest.

LIFEJACKET MANUFACTURER

SUB A 200

CHARACTERISTICS	
codes: 04011	
Type	Inflatable life vest
Activators	04011 - UML MICRO MANUAL with a manual mouth tube on all versions
Canister	2x 24 gram 1/2" GAS threading
Effective buoyancy	200 N
Class	150
Fastening mechanism	Safety harness bearing an adjustable waist belt with quick-release acetal buckle
Size	Adult
Weight supported	> 40 kg
Waist circumference	80 - 125 cm
Casing	Polyester 600 with double PU WR finish in colour black
Chamber	Double chamber, PA 420 PU COATED material, in fluorescent or Spanish yellow colour
Product packaging	Plastic casing
Warranty	24 months
Servicing	Every 24 months
Veleria San Giorgio reserves the right to modify the technical specifications without prior notice	

DONNING INSTRUCTIONS

SUB A 200

A floatation chamber with dual compartments in PA 420 PU COATED material with electronically-controlled high-frequency welds.

Provides optimal positioning and perfect stability in the water. The thrust rotates an unconscious person and angles them so as to keep their airway free of water. What's more, once the chamber is inflated, it is possible to swim unimpeded to reach safety or to quickly climb into a lifeboat.

ACTIVATION SYSTEMS:

- Manual - The system is operated through pulling the dedicated lever. The product comes with the UML MICRO MANUAL activator and is activated exclusively by hand.
- Oral - This type of inflation is achieved via the special mouth tube, with a non-return valve and protective cap. To inflate the chamber, simply blow into the tube.
