GAP - SEMI-RIGID FLOTATION VEST

The 04/G Bulletproof Vest combines the standardised features of a conventional rigid life jacket with those of a standard bulletproof vest.
This Bulletproof Vest combines comfort with particular reference to weight and body contouring, offering freedom of movement for the wearer to allow them to handle long and short weapons without difficulty, both in a standing and kneeling position.
The ballistic chest and back protectors are of the flexible type and come complete with a 10-millimetre thick anti-trauma layer. The additional chest and back protectors are rigid and contained in pockets with a Velcro opening along the top. In the lower part of the casing, on the inside and facing the wearer, are mesh openings to allow water to drain away quickly after use at sea. The vest is also equipped with an abdominal sub-belt to be firmly secured to the wearer's body.
The vest provides protection for the chest, back, collarbones and ribs without causing any discomfort to the neck or arms. The shoulder straps, which connect the front and rear parts, can be adjusted and contain ballistic protection in the same way as the chest and back.
At the front, on the lefthand side, a flotation insert rotates the user if they are unconscious. This obligatorily-asymmetrical solution does not alter the position of the ballistic panel since the wearer's chest rests on a layer of homogenous thickness.
In water, the positive buoyancy provided by the vest is more than 100 Newtons.
