

rescueME MOB2

Art. 41012

Alerting your vessel about a Man Overboard is the **most rapid and reliable recovery option**. In moderate seas, losing sight of a man overboard can occur shockingly fast. That’s why Ocean Signal’s latest **rescueME MOB2** combines both AIS and VHF DSC emergency technology in the latest AIS class M-compliant solution for the maritime market.

Upon activation, the MOB2’s location is regularly updated and displayed on an AIS-enabled plotters. With its integrated GPS, the MOB2 provides precise location data to your vessel and any assisting vessels. Nearby vessels are automatically alerted to man-overboard situations through VHF DSC. The Ocean Signal MOB2 is nearly half the size of the competing products and fits perfectly inside inflatable lifejackets. It also boasts a longer operating life, automatic activation via an inflatable lifejacket, dual IR and White strobe lights, and NFC mobile app connectivity.

General information Art. 41012	
AIS transmission Transmit Power:	1Watt
Frequency:	161.975/162.025MHz
DSC Transmission Transmit Power:	0.5Watt
DSC Frequency:	156.525MHz
DSC Messages:	Individual Distress Relay Distress Alert (by single call made on press of the activation button)
Temperature range (operational):	-20°C – +55°C
Temperature range (storage):	-30°C – +70°C
Waterproof:	10m depth
Weight:	92 grams
Standards:	RTCM SC11901, EN303 098-1
